COVID-19 Pandemic is one of the latest disruptions which transformed tertiary institutions on the way it performs teaching and learning, research, and community engagement. In some cases, this great reset created a condition in which universities becomes more environmentally friendly and sustainable. The impacts of this pandemic force all universities to adapt and mitigate the impacts not only in the present but also in the future. To discuss the experiences of several universities on this matter and in order to document the adaptations of sustainability programs many universities, the UI GreenMetric team held the UI GreenMetric International and National Webinar Series on Managing Sustainable University During Covid-19 Pandemic via Zoom Cloud Meeting application and live video streaming via YouTube. This work contains invited papers which has been presented by the university leaders during several webinar series. The total number of invited speakers in all series was 54 speakers. The presenters were esteemed representatives from universities of UI GreenMetric members (rectors, vice-rectors, sustainability directors, deans, respectful professors). They shared their experience in managing food sufficiency, energy management, teaching, learning, working, waste management, and well-being of all stakeholders to keep performing as a sustainable university during this pandemic.
